Case Study - Bormann Turf - 10kW

Recently entrusted with supplying 72 semi trailers loads of new grass for the redevelopment of the world renowned cricket pitch at **Adelaide Oval**, Langhorne Creek turf company **Bormann Turf** understands the importance of being **'green'**. Being green is essential to their business so it made sense for them to take another green step and go solar.

The 10kW system has the potential to eliminate 100% of day time power usage and any feed is sent back to the grid. Although Bormann turf is known for its grass only, this system is equivalent to planting 1411 trees , taking 14 cars off the road and will remove 17 tonnes of carbon each and every year.

Power from the sun not only keeps their business growing, it has now been used to save them money.
