Case Study - Cleve Newsagency -5kW

Cleve is a small agriculturally based town located on the central Eyre peninsular. A core business in this quaint town is the **Cleve Newsagency**. Stocking everything from newspapers to goldfish, the newsagency is a bustling little business.

Keen to keep their energy costs down the owners of **Cleve Newsagency** teamed with **Class A Energy Solutions** to design a solar PV system to counteract their increasing power costs.

Class A Energy solutions analysts took the size of the business, and their energy usage, into consideration and designed a **5kWh** solar pv system designed to maximize the panels on their roof top. 20 x 250w premium panels were installed with a **German SMA inverter**, on average producing between 21-25kWh of power per day.
