Case Study - Cowell IGA -30kW

The solar experts **Class A Energy Solutions** have worked closely with many **IGA/Foodland** supermarkets across South Australia in assisting these locally owned and operated businesses to not only reduce their carbon footprint but also their power consumption and energy costs.

The forward thinking owners of the IGA supermarket in Cowell understood that the empty roof space on their building could be put to good use generating power for their business and commissioned **Class A Energy Solutions** to tailor a **30kWh** solar system specifically designed for their operation. With a return on investment of approximately 25% the financial benefits were clear. Not only is **IGA Cowell** championing the community, but they are doing their bit to champion the environment as well.
