Case Study - Denis White -30kW

Superior products are important to **Denis White Audio Visual**. This proudly South Australian company ensures that all the products they sell are of the highest quality. It made sense then, when choosing a company to assist them in achieving their power reduction goals, to select **Class A Energy Solutions** who upholds similar ideals. **Class A Energy Solutions** pride itself on using only superior products and panels in all installations.

Denis White wanted a system designed specifically to combat their ever-increasing energy requirements. Class A Energy Solutions expert team analyzed their power consumption and energy needs and tailored a **30kWh** system, which at full capacity, will produce over **120kWh** of electricity per day therefore helping to offset their daily power usage. Solar photovoltaic systems are a proven worthwhile and profitable venture with a return on investment, in this case, of under three years.
