Case Study - Glynde Mitre 10 - 60kW

Glynde Mitre 10 is an independently owned and operated local hardware business that prides itself on being passionate about all aspects of home improvement. They have used this passion for improvement to better the environment (and their pocket) by commissioning **Class A Energy Solutions** to tailor a energy system specifically designed to meet their needs and take control of their energy costs.

Class A Energy Solutions analysed the usage of power, designed and installed a **60KW** solar system, totalling a whopping 240 solar panels at **250watts** per panel.

The system will on average save **91,980kWh** per year in electricity consumption, **67 tonnes** of green house gas emissions which equates to **14 cars** being taken off the road each year. **"Mighty Helpful"** to mother nature.
