## Case Study - Hotel Victor - 30kW

Centrally located on the beach in Victor Harbor, Hotel Victor has all that visitors to the south coast need. All that Historic Victor Harbor has to offer is right on the doorstep. Just a short walk to Main Street Shopping Precinct, the Horse Drawn Tram, SA Whale Centre, Encounter Coast Discovery Centre, the Visitor Information Centre, steam train railway station, Granite Island and a multitude of other local attractions.

Being passionate about sound environmental practices, Hotel Victor made the decision to take control of their energy future and commissioned Class A Energy Solutions to install 30kW solar systems on both their Sip'n Save bottle shop and the hotel itself. With the importance of preserving the beauty of Hotel Victor's exterior the panels have been expertly hidden and can only be seen from an aerial view.

The combination of both systems will on average save **91,980kWh** per year in electricity consumption, **67 tonnes** of green house gas emissions which equates to **14 cars** being taken off the road each year.
