Case Study - Beckers IGA - 30kW

The **IGA** franchise was introduced in Australia in 1988 when ten stores officially became members of the Independent Grocers Alliance. The retail franchise has moved from strength to strength since then and currently operates over **1000 IGA** stores all over Australia. **Becker's IGA**, at Auburn, is one such IGA franchise, and recently commissioned **Class A Energy Solutions** to assist them in exploring the financial and environmental advantages of going solar.

The installation of a **30kW** solar system has not only helped IGA Auburn to lessen their carbon footprint but has also given them a **25% return** on investment... that's better than money in the bank! This investment has proven to be cash flow positive from day one.

Not only is IGA championing the community, but they are doing their bit to champion the environment as well.
