## Case Study - In & Outboard Marine - 50kW

*In & Outboard Marine* is the leading marine dealership in Darwin, servicing Australia's Top End and beyond with Australia's leading brands of boats, engines and accessories. They pride themselves on the fact that they can back up and service what they sell.

Being passionate about sound environmental practices, In & Outboard Marine made the decision to take control of their energy future and commissioned Class A Energy Solutions to design and install a **50kW commercial solar system**.

*Class A Energy Solutions* expert team analysed their power consumption and energy needs and tailored a **50kW system**, which at full capacity, will save them **80,300kWh** per year in electricity. This has proven to be a financially worthwhile investment with positive environmental results.
